RESTAURANT REVIEWS:
Restaurants nowadays prefer taking online orders. It not only helps in getting effective customer feedback but also useful for managing orders easily. We are moving towards an automated and digital world. Having a significant online presence is necessary for any restaurant to be successful and prosperous. Getting customer feedback and analyzing them in an effective manner makes the difference. This study analyses the restaurant reviews and presents useful information that the ratings do not consider or overlook. Combined research is done using two different datasets of restaurant reviews in this paper. Machine learning algorithms like Naïve Bayes and Logistic regression is used for first classifying the reviews in proper aspects then performing sentiment analysis on them.

Summarization is done using gensim and results are displayed using effective visualization techniques. Future work is also discussed so that an efficient analysis system can be developed utilizing the potential of reviews.
